

2026 WHEAT

2565—“LEADER”

- Medium late maturity—Beards
- Excellent yielding with standability
- Med plant height with great test weight
- Awesome eye appeal / very healthy plant
- Wide tillering for wide rows
- Big fat heads—can bump pops
- Plant on any soil type
- Great disease package—minimal fungicide application

2555—“LEADER”

- Medium maturity—Beards
- Yield king for better soils
- Medium plant height
- Excellent standability with average test weight
- High management variety—Fungicide
- Head scab resistance
- Keep off wet soils

2405

- Early maturity—Beards
- Medium plant height
- Impressive FAT HEAD
- Excellent BYD tolerance
- High management for best results
- Head scab resistance
- Above average test weight
- Suited for all soil types
- Excellent yield results in 2024 & 2025

2578

- Medium Early maturity—awn-less
- Excellent overall plant health
- Proven high yielding with standability
- Head scab resistance
- Aggressive tillering
- Showy, big, flex head / 1-2 extra rows
- Excellent straw producer
- Excellent test weight
- Plant on any soil types

- *No opened or partial mini bulk or box returns*
- *No return on true bulk*

Complete treatment protection on every unit of seed wheat

New Custom Wheat Treatment Blend

McKillip Seeds wheat varieties are treated with carefully selected systemic and contact fungicides and insecticide. Our treatments provide protection against a broad spectrum of seed and soil-borne diseases, such as rhizoctonia, seedling blight, loose smut, early season septoria, early suppression of wheat leaf rust and multiple modes of action against fusarium scab and pythium damping off.

Protecting wheat seedlings and getting them off to a healthy start is paramount to a high yielding wheat crop. Additionally, our high-quality wheat seed treatment protects the crop from yield robbing and disease transmitting insects such as Russian Wheat Aphids, English Grain Aphids, Bird Cherry Aphid, and suppression of wireworms, white grubs and Hessian fly.
